A range of reactive air, pressure redistribution and reduction support surfaces

Healthcare professionals involved in the prevention and treatment of pressure ulcers are often faced with time constraints, limited resources and increasing budget pressures all of which can impact on patient outcomes.

Repose[®] is a range of reactive air, pressure redistribution and reduction support surfaces, all with high levels of immersion and envelopment. A combination of unique materials and Smart Valve Technology, has been clinically proven to deliver statistically significant patient benefits.¹

Unlike, other static air products and dynamic systems, through Randomized Control Trials, Repose reduces peak and average pressures and consistently delivers low levels of pressure ulcer incidence, in a cost effective, easy to use system.¹⁻⁵

Repose is indicated for the prevention of pressure ulcers for patients at very high risk and treatment of all categories of pressure ulcer when used as part of a package of care.¹⁻⁵

Reactive
Air

Repose is a range of low-profile reactive air, pressure redistribution and reduction support surfaces

repose[®]
Smart
Valve

Repose Smart Valve regulates optimum levels of inflation, every time

Repose is a comfortable, durable and multi-patient use solution

Repose comes with a three-year warranty as standard

Repose protects patients at all levels of risk

Repose is indicated for the treatment of all categories of pressure ulcers

Repose supports international guidelines for the prevention and treatment of pressure ulcers
